

# Comodo Endpoint Security Manager 3.0

## Professional Edition

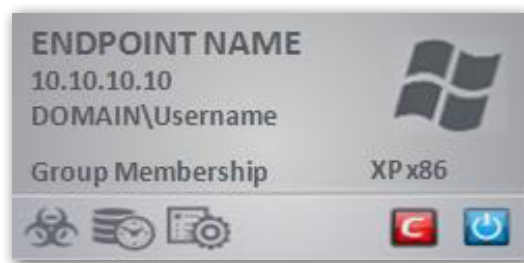

## The Future of Endpoint Administration and Protection: Comodo ESM 3.0

Designed specifically for organizations requiring centralized administration of their computer's and laptop's anti-virus and system health status, the Professional Edition of COMODO Endpoint Security Manager Version 3 sets a new benchmark in endpoint management.

Combining a very short learning curve, the management of COMODO's award winning Endpoint Security suite and the day-to-day information required to supervise system health, Endpoint Security Manager now offers an even more centralized administration platform for the business network.

Our patent-pending panoramic display enables IT security and systems' technicians to have more information at their fingertips facilitating rapid alerting and remediation of issues requiring attention with a minimum of administrative effort.

Each endpoint is represented as a tile containing the 11 critical metrics required by system's/security administration staff.

These include:

- Infection status
- Anti-virus definition database status
- Security policy compliance
- Internet Security Suite status & online status

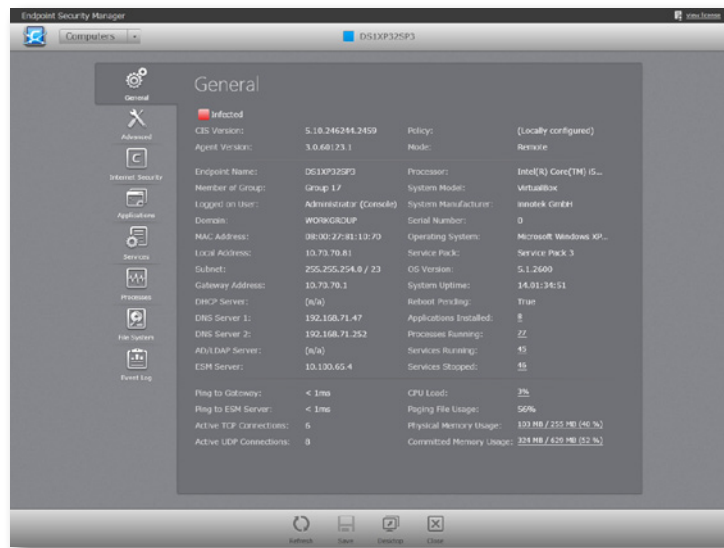

The ESM server's lightweight agent acts as a conduit instructing the endpoint to perform the actions required by the administrator and reporting the endpoints operational status to the management console.

Invoking the properties command, the management agent gathers and returns the operating system, service pack, OS version, whether a reboot is required, networking statistics and CPU, RAM and hard-drive usage metrics. With just one click the administrator is able to view and stop services and processes as well as browse and uninstall msi-based applications.

Armed with this information the administrator can make swift and accurate decisions to protect their infrastructure and ensure the smooth and efficient continuation of user's computing requirements.

### Product Highlights

- Unique patent-pending panoramic display presents "first-glance" view of 11 critical endpoint metrics
- Centralized administration of Windows, Apple OSX and Linux\* workstations and laptop computers inside and outside the business network
- Minimal system requirements allows installation on non-dedicated windows PCs\* or servers
- Browser-based console manages ESM 3 from local or remote Silverlight compatible system
- Deploys and controls Comodo's highly-acclaimed, award-winning Endpoint Security Suite
- White-listing of known-good and trusted local and network files
- CES's auto-sandbox feature runs unknown executables in a virtual environment protecting critical Windows system files and registry settings
- Automated upload of suspicious files to Comodo's Valkyrie malware labs for near real-time analysis and verification
- Manages endpoint processes, services, installed applications, removable devices and power usage
- Fully customizable policies allow granular definition of endpoint configurations

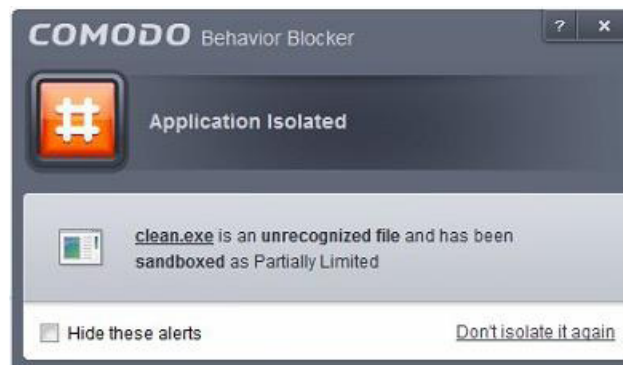

Proactive administration is available through the configuration of policies or templates which dictate the endpoint's behavior. Controlling everything from the definition database update schedule and source, granular manipulation of critical security configurations and file and vendor white-listing, removable device control and power management, the user-friendly policy creation wizard can generate and enforce the administrator's configurations within minutes.

**Endpoint protection** is applied through [Endpoint Security](#) Manager's control of COMODO Endpoint Security v.6, the only anti-malware suite to bring "Defense in Depth" to the desktop environment using the industry's smallest, lightest AV suite.

Combining our Default-Deny™ architecture with best-of-breed blacklist based detection, the industry recognized COMODO Firewall and the behavioral analysis engine of the Defense+ Host Intrusion Prevention System featuring the world's most reliable white-list of verified applications and vendors, results in the radical reduction of the organization's exposure to malware.

This defense is further enhanced with COMODO's patented fully-automatic Auto-Sandbox which defends systems from potentially malicious files by isolating unknown files in a 'virtual' execution environment.

These files are then automatically uploaded to COMODO's malware analysis laboratory where they are subjected to a battery of automated and manual tests.

If the application is safe, it is added to the white-list and allowed to run on the endpoint. If it is determined to be malware, a virus signature is created for it in near real-time and added to the signature database. Once your endpoints have performed their database update and have run their scheduled scans, any instances of this file found in the network are automatically quarantined or removed. This provides a pop-up-free, guesswork-free, worry-free environment for users and administrators.

COMODO Endpoint Security is therefore the only solution which comprehensively protects endpoints from infection or compromise.

We have such confidence that we can malware-proof the organization that COMODO is the only vendor that offers a virus-free guarantee\*\* against infection.

## About Comodo

The Comodo companies provide the infrastructure that is essential in enabling e-merchants, other Internet connected companies, software companies, and individual consumers to interact and conduct business via the Internet safely and securely.

The Comodo companies offer PKI, SSL, Code Signing, Content Verification and Email Certificates; award winning PC security software; vulnerability scanning services for PCI Compliance; secure email and fax services.

Continual innovation, a core competence in PKI, and a commitment to reversing the growth of Internet-crime distinguish the Comodo companies as vital players in the Internet's ongoing development.

Comodo secures and authenticates online transactions and communications for over 200,000 business customers and 40,000,000 users of our desktop security products.
