Protect Your Network with Fully Managed Remote Resources

MANAGED DETECTION & RESPONSE
Growing numbers of more sophisticated cybersecurity attacks threaten your web applications, cloud infrastructure, networks, and endpoints. Failure to protect these resources will trigger costly penalties once a data breach occurs to your business.

Your best defense is a "defense-in-depth" strategy with multiple layers of cybersecurity protections. This approach requires technical experts who are knowledgeable across many security domains. But these days, demand for cybersecurity skills far surpass supply. Skilled resources have become too costly for many small-to-medium-sized, and even some larger, organizations.

Comodo Cybersecurity’s Managed Detection & Response (MDR) Solution delivers comprehensive cybersecurity protection at a price you can afford. Better still, our service frees your IT team to focus on strategic priorities with peace of mind, knowing your systems are defended from advanced threats.

Comodo MDR is a 24/7 Security Operations Center delivered as a Service (SOCaaS). Our service provides a team of security researchers who extend your IT team to safeguard your IT systems and infrastructure.

Using Comodo SIEM and endpoint management technologies along with threat intelligence from the Comodo Threat Lab, our security experts hunt for vulnerabilities, continuously monitor your IT systems for indications of compromise, and contain advanced threats. We work closely with your IT team to prioritize and fix security flaws and remediate issues.
Our fully managed security starts with the Comodo Intrusion Detection System (IDS) via sensors. Security analysts continuously monitor your endpoints and network for malicious activities or policy violations that can lead to intrusions and the attacker’s kill-chain. Artificial intelligence technologies within the Comodo SIEM aid the analysts in detecting compromises to stop them early in this progression.

Analysts use their experience to apply active cyber defense methods. These involve proactively searching client networks to detect threats that are resident in your network to yet be undetected. Threat hunting does not simply wait for correlation rules to alert. Our proactive nature of threat hunting recognizes that threats can still try to evade in-place security protections.

The solution is managed meaning that our analysts take the endpoint and network protections through the process of installation, tuning, learning and putting the defenses in place for the client system in the correct configuration. Managed also means maintaining the state with the addition of endpoints or the collection of other logs. The Response is the alerting and reporting, remediation of events or managing incidents through to resolution.
REMEDIATION
If an incident occurs, IT and security teams may find themselves scrambling to remediate the issue. Taking them away from high priority projects.
Comodo's Advanced Security Agents:
- Focus on incident severity and advanced threat outcomes
- Deliver actionable remediation guides and detailed response plans

COMPLIANCE
Regulations such as GDPR, the California Consumer Privacy Act, HIPAA, and SOX impose hefty penalties for security breaches that threaten data privacy.
- Privacy standards like GDPR, HIPAA, and PCI
- Security standards like ISO 27001, PCI, SOC and NIST CSF

LOWER COSTS
Managing endpoints and networks is costly in terms of staff, technology solutions, and time spent. Many solutions for outsourcing these functions are also tremendously expensive.
Comodo Pricing Plans:
- Package licenses and services into one annual fee
- Plans cost to be affordable for small-medium-sized businesses

LESS COMPLEXITY
Managing defense in-depth solutions is challenging. IT often administers multiple solutions from different vendors. Many solutions lack integration. Comodo MDR simplifies cybersecurity management with:
- One-pane-of-glass integration with Comodo technology
- Network / Cloud + Endpoint + Web protection supported by 3 tiers of analysts

IDENTIFY THREATS
The number of sophisticated cybersecurity threats is increasing exponentially. MDR provides proactive threat hunting that delivers:
- 100 million endpoints that find known and unknown files
- Ongoing threat hunting to detect & find weaknesses

ON DEMAND EXPERTS
IT organizations face a growing shortage of cybersecurity experts. Comodo Cybersecurity's Managed Detection & Response delivers security experts on-demand:
- We provide Tier 1 through 3 analysts on a 24/7 global basis
- We train and provide skilled "watchers" for your organization
STOP CYBER THREATS

COMODO HAS PROVEN RESULTS FOR CYBER SECURITY SOLUTIONS

Comodo has made a paradigm shift in its approach to the malware problem. We are the only company that prevents the damage by putting files into three categories, Good, Bad or unknown. Unknown or bad files are contained until they are verdicted.

GARTNER RECOGNIZED - MAGIC QUADRANT

“ADVANCED CYBERSECURITY TECHNOLOGY THAT PROTECTS YOUR DATA AGAINST ALL UNKNOWN THREATS.”
