

The good news is that the Internet has put new worlds at our fingertips.

The bad news is that we often don't quite know exactly whom we're dealing with in this new world.

How do we know if the company or person we are doing business with is legitimate?

How do we know if a site is pretending to be another company?

We don't.

Unless a business uses Comodo Identity and Trust Assurance solutions.

Comodo's range of solutions gives business the ability to create online trust through proprietary technologies that help e-businesses convert more customers, retain more customers and increase customer lifetime value.

From providing certificates that put the trusted padlock on websites to patented technologies that lets Internet users verify legitimate web content from faked content, Comodo empowers businesses and consumers to authenticate each other and protect their digital identities.

Why you and every business need Comodo

Comodo, one of the world's largest Certification Authorities, has third generation solutions that are setting the standard for Identity and Trust Assurance to ensure both consumers and business' true e-identity and e-business authenticity.

Consumers look to Comodo to feel safe that only authorized people, not fraudsters, are contacting them. Businesses rely on Comodo to differentiate themselves by providing reliable solutions that.

What Comodo offers you: **Creating Trust Online**

All of us know that fraud is pervasive on the Internet and difficult to combat.

Fraudsters successfully use the Internet and malware programs to sidestep many of the so-called security issues. Solutions like Address Verification and Payer Identification programs do not address the growing sophistication of fraud out there because they tend to be reactive and focused on hardware.

But Comodo focuses its technology to provide the next generation of standards in the protection, preservation.

How do we do it?

Comodo provides a growing range of Identity and Trust Assurance encryption, verification and authentication services and security applications for business users, as well as for consumers. Our solutions work across all platforms, including Linux. In addition, we offer the only free online website identity assurance database (IdAuthority) – maintained by a worldwide dedicated team of engineers at our Digital Trust Lab. Users can research any online business through Comodo.

The Result

We ensure confidentiality, authenticity, integrity and availability in online communications and transactions.

The Internet is varied. So are our solutions.

Identity and Trust Assurance for your Infrastructure

Comodo has solutions that work across all your hardware and platforms. These reside on your servers and provide identity assurance to all your applications and services. They also ensure your infrastructure is [protected against viruses](#), hackers and other business vulnerabilities due to online fraud:

- Vulnerability scanning solutions affording your customers extra protection from hackers and malware threats
- Firewall and security solutions to prevent intrusions.

Identity and Trust Assurance tools for the Desktop
