Comodo EPKI Manager

Instant security for your web operations and employee email

- Easy to use web based console
- Issue high quality, fully trusted SSL Certificates
- Issue Corporate Secure Email Certificates quickly to employees and partners
- Create / manage "sub users" and assign specific issuance and reporting permissions to your users
- Gain savings on standard Certificate buy prices
- No extra software / hardware required
- Open an EPKI Manager account in minutes
- Full reporting / Certificate management

The EPKI Manager provides instant security for your web operations, internal networks and employee's email, giving you full access to an outsourced Certificate Authority platform for all your digital certificate requirements.

When considering the implementation options for a digital certificate solution, you will make the choice to opt for an in-house PKI model, or a fully managed outsourced model. Following the in-house option will see enormous costs in time, management, legal fees, development and operational costs. To avoid such barriers for the widespread use of Certificates within an organization, Comodo has developed the enterprise class EPKI Manager - a web based console used to interface with the Comodo Certificate Authority.

With the EPKI, there is no need to invest in expensive hardware, software, expertise and Certification Authority management associated with providing your own certificate solutions. The EPKI Manager allows you to issue Certificates for use within your websites or employees email clients. Comodo already provides industry-leading prices for Certificates; however the EPKI Manager provides even greater discounts on all Certificates.

Organizations opting for the EPKI Manager can benefit from the convenience of having their nominated EPKI Manager Administrator(s) manage all the company's Certificates from a central web based console. The User Management facility allows the Administrator to create new sub-users for the EPKI Manager, each with granular permissions for issuance, revocation and reporting - allowing the enterprise to operate a distributed EPKI without the compromise of security for critical applications.

Additional certificates may be purchased through the console in minutes, ensuring new web servers, employees or internal resources may be secured in minutes rather than days.

Secure your websites

SSL Certificates are the industry standard technology used to secure communications between browsers and web servers. Some organizations will require multiple SSL Certificates to secure multiple servers, web server operations and load balancing. To meet the needs of your organization, the EPKI Manager allows you to procure SSL Certificates on demand.

Secure your enterprise email

The need for email to be secure, confidential and integral is a growing concern for almost every organization. Comodo Corporate Secure Email Certificates address this critical problem and provide the ability to secure and digitally sign email and attachments using any popular mail client. The EPKI Manager provides convenient and secure access to your own web-based console to administer your Corporate Secure Email Certificates to employees and partners.

Assure customers and partners of your identity

Assuring customers of your identity is an essential factor for successful online business. Certificates issued through the EPKI Manager help assure customers of your online and email identity, leading to a higher confidence in who you are. Through the user-friendly interface you can issue digital certificates to web servers, internal servers, employees and partners, certificates that in turn represent the identities and credentials of their owner. The EPKI Manager helps you achieve trust and confidence within an environment where trust and confidence is essential yet currently unavailable.

Easy to use web based Management interface gives control over all certificates and EPKI Manager users

Fully Managed CA Operations

Comodo operate the backend Certification Authority used to issue the SSL and Corporate Secure Email Certificates, including high availability secure redundant server systems, high speed FIPS 140-1 Level 4 signing devices, backup and customer support. All Certificates issued through the EPKI Manager are fully supported by Comodo's industry leading customer support department.

Benefits

Manage your enterprises entire Certificate requirements

SSL Certificates for websites. Corporate Secure Email Certificates for S/MIME compliant mail clients.

Issue your own Certificates cost effectively

There is no need to invest in expensive hardware, software, expertise and Certification Authority management associated with providing your own certificate solutions. The EPKI Manager allows you to issue Certificates for use within websites or employees email clients.

Web based interface for easy issuance

No set up fee is required and you can be up and running in minutes! The user-friendly web based management console gives you easy access to your Certificate management.

Granular EPKI Manager User Management

The EPKI Manager Administrator can add new users to the EPKI account, each with their own access control details and permissions. New users can have issuance abilities for SSL Certificate and / or Corporate Secure Email Certificates, access to money management facilities and access to global or local reporting facilities. This feature allows the EPKI Manager to be accessed by additional enterprise personnel, and permissions assigned accordingly.

Save money on your security requirements

Comodo already provides industry-leading prices for Certificates. Through the EPKI Manager you can take advantage of further discounts on Comodo digital certificates. Multiple Certificate requirements for distributed systems and personnel, as well as load balancing requirements, can be fulfilled quickly, easily and cost effectively.

Apply quickly for your SSL for your web servers and Corporate Secure Email Certificates for employees
