Company Overview

Unisoft Infotech Is an IT Consulting Firm That Provides Exceptional Talent, Unique HR, and Technology Solutions to Clients.

Based in Singapore, Unisoft Infotech is an IT consulting firm with strong knowledge, expertise, and resource base across technology from Data Science to ERP. Unisoft is on a mission to provide outstanding service to clients; the company looks to accomplish this through empowered teams and unique solutions that are designed to provide businesses with a competitive edge.

Unisoft Infotech utilizes its over 25 years of experience in providing staffing solutions across all industries including healthcare, automobile, telecommunications, and e-commerce, and partnerships with companies that are known to be the “best in their business” to deliver on its promise of providing solutions that allow clients to focus on their own core businesses.

Their Challenge

As a provider of HR and technology solutions, Unisoft InfoTech wanted to make sure that its systems and solutions were “100%” safe from cyber-threats such as malware threats and viruses. This meant that the company needed a robust cyber-security solution.

The cyber-security protection that was previously in place at Unisoft InfoTech was a simple antivirus that could not provide the level of protection that the company needed and desired. Realizing, Unisoft decided to upgrade from a mere antivirus to endpoint protection. Once this decision was made, the company started to search for solutions that could meet its requirements and standards for endpoint protection.

During its search, the team at Unisoft came across Symantec’s Endpoint Protection. The team ran a trial of the Symantec solution but wasn’t completely satisfied with the features it offered. As a result, Unisoft started to look for alternatives and ultimately came across Comodo which it found to be better than Symantec’s Endpoint Protection or other solutions that it had trial tested.
“We needed 100% security from viruses and malware threats, so we decided to upgrade from a mere antivirus to endpoint protection. When evaluating products, we compared Symantec’s Endpoint Protection to Comodo’s, and the latter had better features. Comodo’s Dragon with AEP and auto-containment detects and responds in a way that users need not worry about any incoming virus threats; they can continue to concentrate on business enhancement, says Thenappan Vellachami, Founder and Director, of Unisoft InfoTech.

The Solution

Unisoft Infotech Partnered with Comodo to Add the Latter’s Security Solutions to Its Offering.

“We chose Comodo, because of its auto-containment technology,” revealed Vellachami.

Unisoft chose Comodo’s Dragon Platform with Advanced Endpoint Protection (AEP), which is a patent-pending auto containment technology with active breach protection that neutralizes ransomware, malware, and cyber-attacks.

Comodo’s AEP utilizes a Default Deny Platform to provide complete protection against zero-day threats while having no impact on end-user experience or workflows. Additionally, Comodo’s Valkyrie analyzes and gives a trusted verdict for 100% of files on a network.

“With its built-in auto containment technology, irrespective of the classification of virus or malware – whether it is ‘good’, ‘bad’, or ‘unknown’, Comodo will contain and quarantine all of them in a dedicated area. Having a file system where 100% of files get a trusted verdict means that we don’t have to use our staff and resources doing it manually,” says Vellachami.

Comodo’s platform shares intelligence and is, therefore, more secure than disparate products that claim the best of the breed but don’t share information. Comodo has architected its cyber-security product to maximize intelligent sharing between every component of the platform, therefore providing superior security.

“The best thing about Comodo’s Dragon platform is the excellently managed services – the threat detection and response is very organized and user friendly. Adding additional existing endpoint manager licenses is done by simply linking the licenses. Plus, the insights and analytics of threat management are of great use to us,” says Thenappan.
Comodo’s security solutions put Unisoft in a position to better serve its clients. Alan Kneipfer, President and Chief Revenue Officer at Comodo, says, “Our partnership and world-class solutions will help Unisoft’s customers stop worrying about cyber threats so they can focus on their business.”
